

Your Dog's Individualized Immunization Protocol

Is your pet at risk? How do we determine risk level?

There are two major criteria to determine your pet's risk of contracting a disease.

Life Stage

Small Breed

What age is your dog?

- Adult (1 - 7 Years)
- Senior (7 - 14 years)
- Geriatric (>14 years)

Large Breed

What age is your dog?

- Adult (1 - 4 Years)
- Senior (4 - 8 years)
- Geriatric (>8 years)

Life Style

We have some questions to determine, "How social is your pet?"

This is very important in determining what vaccinations your pet needs.

- Does your dog go to grooming? Yes No
- Does your dog go to a boarding facility when you travel? Yes No
- Does your dog like to go outside? Yes No
- Does your dog go to parks? Yes No
- Do you travel with your pet? Yes No
- Does your dog play in water – bayou, lake, river? Yes No
- Are there rodents, raccoons, squirrels, or deer in your environment? Yes No

ADULT DOG SCHEDULE

Annual Wellness Visit

Physical Exam
Heartworm Occult Screen
Intestinal Parasite Screen
Deworming
Bordetella
Rabies (Every 3 years)
Canine Influenza Vaccine (yearly)

Semi Annual Wellness Visit

Physical Exam
Intestinal Parasite Screen
Deworming
Baseline Wellness Blood & Urine
Leptosporosis
Bordetella
DHPP (Every 3 years)

12 System Physical Examination (2x a year for Life): A thorough physical exam can be more important than vaccinations. Examinations are the time for a veterinarian to catch illnesses early such as dental disease, ear infections, skin cancer, arthritis, cardiac disease, and many other disease processes. However, not all diseases are detectable on physical exam. That is why UVH recommends annual baseline wellness blood work (chemistry and complete blood count) along with analysis of your pet's urine. This will give us the chance to not only examine the outside, but also the inner workings of your pet. These baseline tests are strongly recommended for any pet over the age of 5. If your pet is on chronic medications or has been diagnosed with a condition, we may monitor these values more frequently.

REMINDERS: 1. Please bring in a fresh fecal sample (at least 1-2 tsp) for an Intestinal Parasite Screen.
2. Don't forget to Microchip. 3. Don't forget to refill your heartworm, flea, and tick prevention.

LEGEND

DHPP = Distemper, Hepatitis, Parvo and Parainfluenza

Life Stage + Life Style = Your Pet's Protocol
