

# Your Puppy's Individualized Immunization Protocol

## Life Stage

Congratulations on your puppy! Your puppy is in the pediatric or juvenile stage of life and needs several boosters to jump start immunity and provide protection before becoming an adult.

## Life Style

Your puppy is playful and growing and will be traveling to UVH several times this year for boosters. It is very important to provide a great foundation for immunity. After the last set of boosters, when your pup is about 1 year of age, your visits will decrease to every 6 months and we can begin to select what vaccinations your dog needs.
